

 QuickGene Series **Application Guide****total RNA Extraction from Respiratory Syncytial (RS) Virus Solution**

Kit : QuickGene RNA tissue kit S II
Model : QuickGene-810 / QuickGene-Mini80

Summary

Enables easy and rapid total RNA extraction from RS virus solution

● Protocol

*1 : In the case of QuickGene-Mini80, please refer to the Kit Handbook for details.

* Perform extraction within 30 min after lysate preparation.

Results : total RNA extraction from RS virus solution

total RNA was extracted from RS virus solution using QuickGene system (QuickGene and QuickGene RNA tissue kit S II) and Spin column method (A company).

After culture of the following viral strain transmitted to Hep cells, centrifuging (3,000 rpm, 15 min) was carried out following good achievement of cytopathic effect. Then, the supernatant was used as virus solution.

Hep cells were cultured in DMEM added with 10% FBS.

- Viral strains No. 1 : RS virus Long strain
No. 2 : RS virus A2 strain

● The purity of total RNA

As absorbance at 280 nm was under detection limit for each total RNA, little contamination of protein is indicated.

● RT-PCR

RT-PCR was performed with primer characteristic to G protein gene of RS virus for total RNA extracted from RS virus solution using QuickGene system and Spin column method (A company).

Long strain

Electrophoresis condition : 2% agarose/1 x TAE

- M : 100 bp DNA Ladder
1 : RC virus, 10^5 pfu/ml
2 : RC virus, 10^4 pfu/ml
3 : RC virus, 10^3 pfu/ml
4 : RC virus, 10^2 pfu/ml
5 : RC virus, 10 pfu/ml
6 : RC virus, 1 pfu/ml
7 : Negative control

A2 strain

RT-PCR products of G protein gene of RS virus were detected for each total RNA.
